CL02 - Conditionals and Evaluating Expressions

Simplify: $2 + 4 / 2 * 2$

(Reminder: P E M D A S)

Simplify: $2 + 4 / 2 * 2$

What **type** is $2 + 4 / 2 * 2$?

Simplify:

$220 \geq \text{int}((\text{"1"} + \text{"1"} + \text{"0"}) * 2)$

Takeaways

- Ordering of simplifying expressions
- How types can change when simplifying expressions

Conditionals

Recall: Finding the Lowest Card

Low card:

If current card < low card,
make it the low card.

Recall: Finding the Lowest Card

2 < 5?

Low card:

If current card < low card,
make it the low card.

Recall: Finding the Lowest Card

$3 < 2?$ 

Low card:

If current card $<$ low card,
make it the low card.

Recall: Finding the Lowest Card

5 < 2? 

Low card:

If current card < low card,
make it the low card.

Recall: Finding the Lowest Card

5 < 2? 

Low card:

If current card < low card,
make it the low card.

Recall: Finding the Lowest Card

Low card:

Conditional Statement

If current card < low card,
make it the low card.

Conditional Statements

```
if <something>: ← bool  
    <do something>
```

Conditional Statements

if <something>:

 <do something>

else:

 <do something else>

Conditional Statements

if <something>:

<do something>

else:

<do something else>

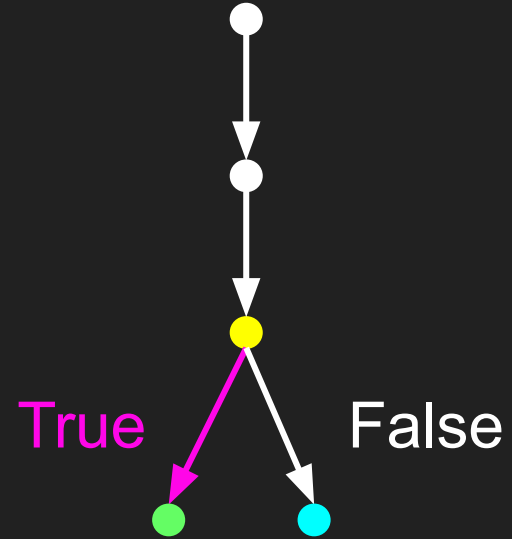

Conditional Statements

if <something>:

 <do something>

else:

 <do something else>

Discussion

What is a decision you make in your day-to-day that you can express as an conditional (if-else) statement?

E.g. If I my assignment is due tomorrow, I start working on it. Else (it's not due tomorrow), I procrastinate another day.

(This is bad behavior and I don't condone it!)

Conditional Statements

if <something>:

 <do something>

else:

 <do something else>

<more stuff outside of conditional>
